

Leveling Strip

Green Roof Solutions' Leveling Strips are installed adjacent to pavers for a clean transition from paver to green roof.

Because Edge Restraint rests on the uneven, pitched roof deck, the line created by the top of the edge restraint can be uneven. For projects that require a clean finish, these strips are easily connected to the vertical leg of the edge restraint.

In order to ensure proper flow rates, be sure that drainage slots on edge restraint are not blocked by leveling strips.

PRODUCT DATA

| | |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------|
| Material | 0.10" thick aluminum (Marine Grade H32 5052) Stainless steel (304 2B Grade) Other specialty metals upon request |
| Coating | Powder coating available |
| Length | 96" |
| Height | Standard: 4" or 6" Other heights available upon request |
| Accessories Included | 4 bolt sets per piece |
| Options | Can be made with or without pre-drilled holes. Pre-drilled holes are recommended when powder coating. |
| Warranty | 10 years <i>* Please note, exclusions include but are not limited to staining on aluminum edge and accessories</i> |
